

*Letter -
Ackerman*

November 14, 1979

Sigurd Ackerman, M.D.
Montefiore Hospital
Bronx, New York 10467

Dear Sig,

Enclosed are the two reprints concerning our studies of lactate in anxiety. The letter was a way to indicate that we had replicated the findings of Pitts and McClure. We did not go further as the proposals, sent to NIMH, were not accepted. (Since then, the reviewers have undertaken very similar studies.)

The EEG report summarizes our few records in the first sample.

I hope these are of interest. It was a pleasure discussing your work.

My regards.

Sincerely yours,

Max

Max Fink, M.D.
Professor of Psychiatry
