Czechoslovakia

Dear Milos,

Thank you for your letter of October 19. I had a very pleasant meeting with Dr. Vinar in Madrid and I think it was a well run session.

No, I did not receive samples of l- and dl-cycloserine which you describe as leaving Prague in August. If these had been received in Missouri, I am sure that my associates would have sent it on to me. However, I will be in St. Louis at the end of the week, and I will specifically inquire as to whether such a package had been received.

Dr. Simeon is moving to New York early in January and we hope to be able to undertake some joint studies soon thereafter.

I have just received a letter from Dr. Bradley indicating that the legends for the figures for your paper in the symposium "Anticholinergic Drugs and Brain Function in Animals and Man" were missing. I reread my copy of your paper and see that you have included the figures without a description, assuming that the text describes each figure accurately enough. It would be helpful if you would provide legends for each figure separately, and send these directly to Dr. Bradley.

As I told you in Washington, I am unhappy that I have not renewed many of my subscriptions for journals, since in Missouri almost all the journals for the library came first to me. I am now establishing some other subscriptions. In the meantime, I have asked my secretary to send you each of the journals that I receive, except for the EEG journal which I wish to keep.

Dr. Vojtechovsky

In an earlier letter you were kind enough to invite me to come to Europe in January. I do not think this is possible as I am in the midst of a new program and what seems delightful and possible in the early summer becomes very difficult six months later. But, many thanks again for your kind invitation.

Again, my thanks for your participation in the meetings in Washington. My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
