Edward V. Henry, M.D.  
Assistant Director  
Clinical Investigation  
McNeil Laboratories, Inc.  
Camp Hill Road,  
Fort Washington, Pa.

Dear Dr. Henry:

Dr. Don and I have reviewed the trifluoperidol project. We find that ten patients are now in the study. Our dosage range has gradually risen so that now all our patients receive doses of between 15-30 mg. for a minimum four week period.

We are in need of additional supplies and would be grateful for you sending us 250 bottles (50 tab/b).

However, since our doses are relatively high, if you have trifluoperidol in a tablet of a larger size such as 2-1/2 or 5 mg. preferably enteric coated (since the taste has brought complaints), we would appreciate a supply of these larger size, as well.

Thank you very much.

Sincerely yours,

Max Fink, M.D.  
Director
