

December 29, 1971

William Bunney, M.D.
National Institute of Mental Health
Rockville, Maryland

Dear Dr. Bunney,

In the course of our studies of cannabis, I became acquainted with Dr. Raphael Mechoulam of the Hebrew University. Dr. Freedman was able to interest him in the problem of the development of a long acting narcotic antagonist. A copy of a recent letter from him is enclosed for your information.

Should there be a list of potential laboratories capable of studying the problem of a long acting antagonist, you may wish to add his name, and consider his participation in any collaborative program.

My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
