Dr. Joseph Tecce
Laboratory of Adult Psychiatry
National Institute of Mental Health
National Bank Building
Bethesda 14, Maryland

Dear Dr. Tecce:

In some ways, I was pleased to receive your call this morning because I feel that opportunities to study with experienced investigators in the early stages of career development are crucial in determining the extent to which any scientist will make a contribution.

Since you are undertaking a course in computer sciences, may I suggest that you contact Dr. Ron Bonato at the Biometric Laboratory, George Washington University, who has extensive experience and is making a first rate contribution to their use in psychopharmacology.

I am enclosing copies of three interim reports dated October, January and February, which describe the development of our computer unit and its studies of EEG signals.

We are now embarking on a series of studies to apply computer techniques to library sciences, and concurrently I am anxious to begin studies on the use of this unit in experimental psychological studies.

Good luck in your application. If you have an opportunity to pass through St. Louis, I would be pleased to have you visit us.

Sincerely yours,

Max Fink, M.D.
Director
