Dr. Allen P. Borger
Chas. Pfizer & Company
Groton, Connecticut

Dear Allen: RE: Thiothixene - EEG Study

I have reviewed the studies of thiothixene oral concentrate and capsules, undertaken between August 1 and August 23. Using the protocol dated 8/21/69, we have completed 27 experiments.

The variability in these experiments was high, in part, occasioned by our failure to carry out a more complete preliminary study.

Enclosed is a revised protocol (III) dated 8/25/69, which summarizes our initial experiences and is the one which is now operational.

This study is running well and should be completed within six weeks.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
