Donald Jenden, M.D.,  
Department of Pharmacology,  
University of California,  
Los Angeles, California.

Dear Don,

I very much enjoyed our discussion in San Juan. Should the opportunity arise, I look forward to greeting you in New York, and will try to visit your laboratories as soon as I am able.

I am enclosing a few reprints which describe our point of view with regard to ECT, and a preprint of a summary of our work in EEG profile analysis.

The new methods which you described for the measurement of acetylcholine seem so much more exact than anything we have had before, that their application to the ECT problem should be most rewarding.

My best regards.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
