AIR MAIL

Dr. Dieter Bente
Chairman of the Programme Committee
Universitäts-Nervenlinik
Schwabachanlage 10
Erlangen, Germany

Dear Dieter:

I should like to participate in the 1964 C.I.N.P. program and for this reason, I am submitting the enclosed abstract, "Drug Induced Dissolution of Cortical Electrical Activity and Its Correlation to Psychopathological Phenomena" for the consideration of the Programme Committee. I have been interested in this problem for many years, and the observations reported here have been made in our new laboratories. It would be a great pleasure to share this communication with the fellowship.

Turan is sending separately a report of his clinical work for your consideration.

Our best wishes for the New Year.

Sincerely yours,

Max Fink, M. D.
Director
