Morris Plains, New Jersey

Gentlemen:

I have read your advertisement describing the action of chlorphentermine (Pre-Sate) with considerable interest. I would appreciate a supply of this compound for clinical trials in quantities sufficient to assess its effect in five subjects over a month period.

The advertisement indicates that the CNS side effects are less than amphetamine. I would be interested in knowing the data which makes this conclusion possible. Thank you for your assistance.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
