

September 29, 1965

Dr. Paul E. Feldman
Topeka State Hospital
Topeka, Kansas

Dear Paul:

Enclosed is a draft of the presentation for the Divisional APA meeting of October 9. As you will note, I am raising many issues which have been important in the testing of new drugs. It is my intention to bring to the attention of the local psychiatric community some of the problems which centers such as ours have faced. By presenting these problems in a general and open fashion, I hope that the climate of opinion may be directed towards being more generous and more tolerant with those investigators who are struggling with the complex problem of evaluating new drugs.

My best regards, and I look forward to seeing you at the meetings.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
