

January 16, 1967

Dr. Turan M. Itil
Missouri Institute of Psychiatry
5400 Arsenal Street
St. Louis, Missouri 63139

Dear Turan,

I had an opportunity to speak to Don on Friday. He indicated that the programs for the SKF material now seems operational and it should be possible to have some data analyses in the coming week. He was not sure as to the status of the CDT - EEG material, but did ask some questions regarding the Denber EEG - behavioral study. It seems that it is now necessary to select the specific behavioral ratings and match them with the EEG ratings so that the correlations can be undertaken. I wonder if it might not be more helpful for her to devote her time to the CDT project. Is it possible to assign one of the other girls to help out at this time?

I urged Don to discuss this with you, but perhaps he may feel inhibited. Incidentally, I am going to California during the last weekend of January and can change the arrangements so that I can stop in St. Louis for a few hours either before or after the visit.

I am sorry we will not have an opportunity to see you next week. Give my regards to Ellen.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
