Murray Wiengr, M.D.
Merrill Laboratories
Amity Road
Cincinnati, Ohio 45215

Dear Murray:

In following up some studies, I came upon two references regarding the effects of antihistaminic agents on EEG in the rat by Faingold and Berry. These reports demonstrate the central effects of antihistaminic agents and provide some evidence that the effects of antihistaminic agents can be discriminated.

My best regards for a happy 1974.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
