

73SB-701

June 15th, 1973

Turan Itil, M.D.,
Missouri Institute of Psychiatry,
5400 Arsenal Street,
St. Louis, Missouri 63139.

Dear Turan,

Enclosed is a summary which I presented at the advanced course of EEG Technologists. The only new thing is Table 5, which is the same table that I presented at the ECDEU.

I expect Dr. Herrmann here on Monday, as I saw him at the meetings in Boston. We agreed that he had misunderstood me, for I had said that every compound that we had tested has shown the EEG behavioral correlation; only OI-63, for which we have some animal data, but no human evidence of efficacy, remains to be tested.

My best regards.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
