Dr. Peter Riedesser,  
Psychiatrische und Nerven-Klinik  
der Universität Freiburg,  
78 Freiburg im Breisgau, den,  
Hauptstraße 5,  
Germany.

Dear Doctor Riedesser,

Enclosed is a summary report on the narcotic antagonists which I completed in September for the National Commission on Marijuana and Drug Abuse. (Because of the duplication costs, I would appreciate your sending a check in the amount of twenty (20) marks).

This report is complete up to September and we have no additional information since then.

With regard to the complications of methadone, I suggest that you see the latest issue of the Archives of General Psychiatry, where there is a fine article by Jasinsky, Martin and their coworkers on the pharmacology of methadone. Quotations from this article should suffice to give the reader a clear picture of the risks and benefits of methadone use.

Please note the change of my address. I look forward to reading a copy of your synopsis as soon as it is available.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
