Dr. Fritz A. Freyhan, M. D.
Director of Clinical Studies
Clinical Neuropharmacology
Research Center, CI, NIMH
William A. White Building
Saint Elizabeths Hospital
Washington, D. C. 20032

Dear Fritz:

I enjoyed my visit to your laboratories very much and found Drs. Salamon and Post to be delightful and bright young men. I think their project is a good one and in response to their request I am enclosing a number of reprints of some of my studies relevant to their project. I would appreciate your sending these on to them.

I am also enclosing a few of the preprints of our quantitative EEG work which Dr. Louise Speck may find of interest. We do not have a LINC available to us, and if she is studying the changes in brain waves using that instrument I would be pleased to visit with her during my next trip to Washington.

I should also like to tell you that I would be honored to consult with members of your staff in study programs especially those related to clinical neurophysiology.

My best regards.

Sincerely yours,

Max Fink, M. D.
Professor of Psychiatry
