

March 15, 1971

Mr. H. E. Stewart  
Administrator  
Sydney City Hospital  
Sydney, Nova Scotia

Dear Mr. Stewart:

Dr. Waheedul Haque was a resident in training at the Missouri Institute of Psychiatry in 1963 or 1964. During his tenure he participated actively in a study of the effects of high dose LSD in psychotics and was co-author of our report on "Prolonged Adverse Reactions to LSD in Psychotic Subjects", published in 1966. He left soon after completing this study.

As I recall, he was reliable, interested in his work, and participated actively in our program.

Sincerely yours,

Max Fink, M.D.  
Professor of Psychiatry
