David Davis
PRB-NIMH
Rockville, Maryland

Dear Mr. David,

Thank you for the print-out of the ECDEU summaries on clomacran. These were indeed very helpful in my decision not to undertake an EEG study of this drug at this time.

There are two other searches which are of immediate interest. I am preparing a report of the EEG profile studies of doxepin, and clinical evaluations of the compound in depressive states, and in anxiety states, would be of interest as background for the evaluation of this profile.

Secondly, I am contemplating EEG studies of ORF 8063 (Ortho) and PR-F-36-CL (Pharma Research Canada). Are there any clinical studies of these drugs underway in the ECDEU system ?

Many thanks, again, for the data on clomacran.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
