

October 12, 1966

Mr. Richard Kopensky
EEG Laboratory
U. S. Naval Hospital
San Diego, California 92134

Dear Mr. Kopensky:

At the American EEG Society, I learned of your interest in working in the EEG laboratory early in 1967. We are establishing a new quantitative EEG laboratory at the New York Medical College - Metropolitan Hospital Center. Our specific interest is in computer analyses of EEG signals as applied to the measurement of psychotropic drug effects. If you are interested in relocating to New York, I would be pleased to hear from you.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
