

July 23, 1970

Dear Turan,

Skiing in January ?

Richard Rech of Dartmouth called to invite a program for the Brain Research group in Aspen for 1971. I suggested that you would be pleased to present your findings on the EEG effects of psychoactive drugs on the sleep EEG. The focus is on the correlations of EEG in man and animals. He is inviting Wallace Winters and himself. I suggested that Charlie Shagass present data bridging man and animals; I would do the awake EEG and would you take the sleep EEG ?

The focus could be the hallucinogens, particularly the effects of indole and anticholinergics.

The date: January 18, 1971

Meeting dates: January 16-22, 1971

Place: Wildwood-at-Aspen

(I will be taking one or two of my children. Bring Kurt and Ellen.)

See you in Prague and Istanbul.

My best.

Sincerely yours,

Max
