Dr. T. Panioutopolis
Eginition Hospital
Athens, Greece

Dear Tom,

Enclosed is the output of your tape and a summary page. We played it back with each condition as if it were a separate experiment. There are two outputs, one before 'artefacting' and one after. The base period is the first, eyes closed sample. You will note, by checking the number of samples artefacted, that our staff thought too many samples in the eyes open record were not of cerebral origin, and therefore the significance of this piece is low.

The eyes open record is interesting, there being many big differences in the two samples obtained on days 1 and 2. The meaning must be left to your clinical acumen.

I trust this review is helpful.

It was fun discussing the project with you in Athens and I hope that I will have another opportunity soon to visit with you. Good luck in the withdrawal study.

Sincerely yours,

Max Fink, M.D.
