

November 9, 1964

George E. Crane, M.D.,  
Early Clinical Drug Evaluation  
Unit Director  
Psychopharmacology Service Center  
National Bank Building  
Bethesda, Maryland 20014

Dear George:

Thank you very much for the list of studies undertaken by the E.C.D.E.U. units up to July, 1964. In looking over this list, I find only one study listed as a combination, that of Wheatley's amobarbital-chlordiazepoxide. It is my recollection that there are some other combination studies, and since combinations may have a different clinical effect than single drugs alone, I am writing to suggest that in the next listing, it might be helpful if combinations were listed as combinations.

Thank you very much for sending me a copy of this report.

Sincerely yours,

Max Fink, M.D.  
Director
