Dr. Ron Bonato
The George Washington University
Biometric Laboratory, Room 618
1145 Nineteenth Street, N. W.
Washington 6, D. C.

Dear Ron:

As I finished editing the enclosed abstract for the Central EEG Society (a meeting which I did not attend because I have been ill since leaving Florida) I was reminded of our discussion about the computer analysis of EEG and that I had promised to send you some of our reports. These are enclosed and represent serially, an early presentation to the 1620 user's group, an addendum for the ACNP meeting in January, and this abstract for the EEG Society which should have been presented yesterday.

I have taken the liberty of sending copies of these documents to Dr. Waxman for his information as well.

I would be most pleased to have you visit us. We are now in the midst of the study described in the abstract and we should have sufficient data to make some judgment by the middle of March.

The cards from your laboratory concerning my Hillside experiences arrived safely. Many thanks.

My best regards.

Sincerely yours,

Max Fink, M. D.
Director
