Wilhelm-Klein-Strasse 27
SWITZERLAND

Dear Paul:

It should be possible for Dr. Gastpar to work with us this coming summer. Most of our work is devoted to the recording and analysis of the EEG. We have no expertise in GSR or respiration. There are, however, scientists on this campus who are well known (Bernard Tursky and Milton Lodge), and they might be willing to have Dr. Gastpar visit. From my experience here, I believe he might be interested in spending time with Dr. Ax in Detroit, for he has a fine reputation in psychophysiology.

Should Dr. Gastpar be interested in working here, I suggest that he tell me something about his experience and what he would like to achieve in a visit here. If I can, I will respond by suggesting the kind of work that would help him and be consistent with the work in the laboratory.

Thank you for thinking of us. My best regards,

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
