Dear Milt:

I have just returned from a most stimulating trip to Europe. While in Holland, I met with friends at N. V. Organon, a pharmaceutical concern now actively involved in psychopharmacology. They are interested in expanding their programs. Should you be interested in working in Europe, I would suggest that you send a copy of your Curriculum Vitae to Henk van Riezen, M. D.

Dr. van Riezen and his co-workers are among the finest scientists with whom I have been associated. They have unusual compounds and investigate them for human trial by the most advanced methods. It would be fair to say that I know of no other concern which would provide as fine an opportunity to work imaginatively.

Following my visit to Holland, I attended a meeting on computerized EEG and met Leo Goldstein there. At breakfast, we shared with me your wish to leave your present laboratory.

My best regards.

Sincerely yours,

Max Fink, M. D.
