Dr. Maurice Seevers
University of Michigan
Department of Pharmacology
Ann Arbor, Michigan

Dear Dr. Seevers:

In a letter from Dr. G. F. Blane of Reckitt and Colman describing studies with narcotic antagonists, he mentions 320-M as an interesting compound at Michigan University which failed "to protect dependent monkeys against symptoms of morphine withdrawal". I presume the work comes from your laboratory and would appreciate your referring this note to the appropriate co-worker for any pre-prints that may be available.

Many thanks.

Sincerely yours,

Max Fink, M.D.
Professor of Psychiatry
