STONY BROOK SCHOOL OF MEDICINE

CLASS OF 1991

Our Spot On The Island

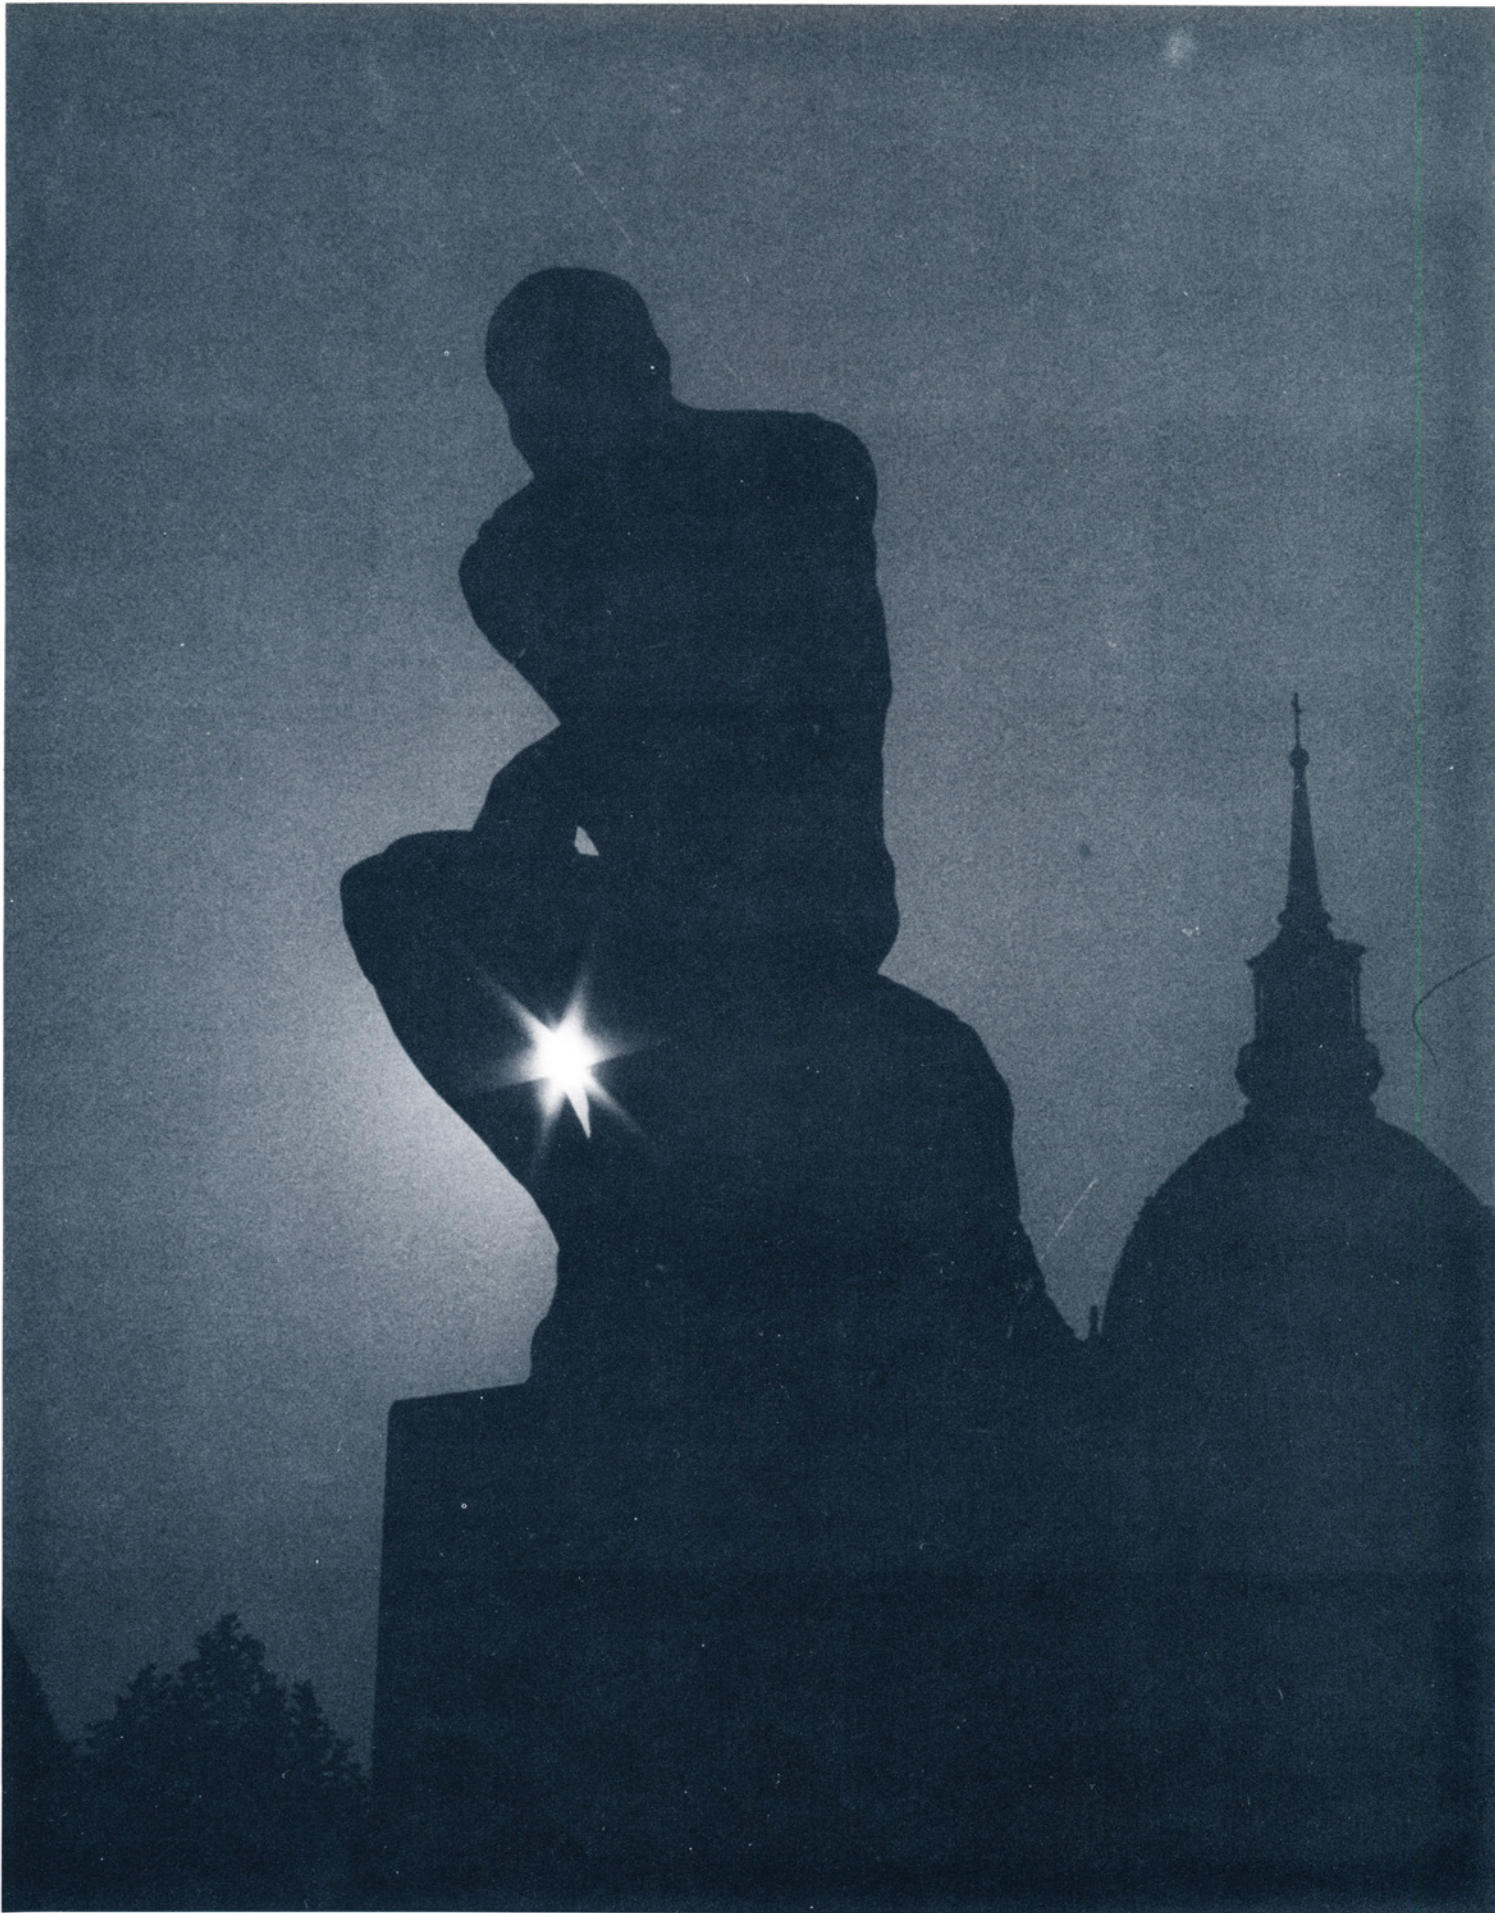

Class of 1991

To right the wrongs of Nature
is God's work
so we are Gods
Or his hands
Or his brain.
And when we fail we are men
Frail, confused, hurt men.
But tomorrow we are Gods again
weaving our way
through miracles that make Life
And probe and ponder
And look through the secrets of God
To raise a fallen body
To clear a clouded mind.
And so to men we are Gods
To God we are men
And to us we are neither.
Not so, we are doctors.

Deans

Jordan J. Cohen, M.D.
Dean School of Medicine

To the Class of 1991:

The year of the palindrome! 1991 spelled backwards is 1991. The only class in the history of Stony Brook to look the same coming and going. Indeed no other class in this century can make that claim.

But let's get real. Nothing could be further from the truth than the statement: "You look the same coming and going." And I don't just mean you're all four years older. These last four years have, for the vast majority of you, been by far the most defining years of your life. As a result of your experiences at Stony Brook you will never be the same. Your knowledge, your skills, your opportunities, your perspective, your very identity have all changed irreversibly. Call it the alchemy of medical school — the transformation of base elements to pure gold!

But that's not true either. I prefer to think that the enormous changes that have occurred in each of your lives are, in actuality, more at the surface of who you are than at the core of your character. I prefer to believe, for most of you, the set of fundamental personal attributes that you brought to medical school — nay that propelled you to come to medical school — are immutable by any alchemy. I am referring to your idealism, your commitment to serving others, your honesty, your humanism, your integrity, your devotion to learning and to teaching, your empathy and compassion. In all of these crucial ways, I prefer to believe that you are indeed palindromic — that you do look the same going as you did coming — and that you will never change despite the even more powerful alchemy to which you are about to be exposed: the alchemy of the real, work-a-day world. Much that you will experience during your professional careers will threaten to replace, or at least to tarnish, your golden characters with cynicism, avarice, indifference, anti-intellectualism, self interest. I prefer to believe that your experiences at Stony Brook have fortified you — have molded those nuggets of golden virtue that you brought with you into an invincible shield — call it professionalism — a shield that will deflect any threat to the standards you have established for yourself and that will enable you to provide the leadership our profession needs from you.

My very best wishes for your continued success.

Dear Class of 1991:

Having first met the Class of 1991 at the halfway point, I have only had the "clinical years" to get acquainted. Nevertheless, it is most often in clinical settings that souls are bared, inner values emerge and are tested, and career choices are made. I have had the pleasure of sharing with you these formulative times, and have greatly enjoyed the opportunity to work with you in the "quest for internships." The MATCH results are a cause for general joy and celebration. You have worked hard and deserve your coveted post-graduate training positions.

Stony Brook is a young medical school with approximately 1000 graduates, the majority of whom are still in various stages of training. As such, you are the ambassadors who will set the standards by which future Stony Brook graduates will be judged. I am confident you will do well and will pave the way for those who follow. I wish you success in all the days to come.

Pierce Gardner, M.D.

Associate Dean for Academic Affairs

Pierce Gardner

Dear Class of 1991:

For the second time in four years, I am privileged to write to you and offer congratulations!!!! You have worked very hard to reach this point, and we have looked forward to celebrating this day with you. It is with some mixed feelings though, since many of you have become friends over the years and I am sorry to say good-bye.

Several weeks ago, I attended a wedding of someone from the Class of '86. Except for the bride, I expected to know no one, but, to my delight, there were many others from that graduating class. It was like seeing family: Barbara was finishing a fellowship in Oncology at Sloan Kettering and talked about the time that she had spent in Tanzania; Elise and John talked about their careers and introduced me to their young son, Jack; Gail was deliriously happy and overwhelmingly busy at Jacobi, saying it felt like being a waitress on roller skates at Woolworth's, but that this is just what she hoped for; and Susan, who had done her residency at Duke, just returned from Zimbabwe after two years, and was on her way to a position at Mass General. I can't describe to you the warmth, the happiness, the good feelings, and the interest that these former students had in Stony Brook, one another, and you.

It's been fun watching you go through these four years, sharing problems (mine and yours), and together trying to make Stony Brook a better place for all of us, and for those who will follow us. I can vividly remember the days some of you interviewed: Mark, Meg, Jeanne, Shaila, George, Regan, Melanie, and my delight to learn that you would be coming here and that I would get to know you better. I also recall early conversations with others: David, Paul, Theresa, Rich, Celia, Steve, and Nina. I learned a lot from many of you, and we certainly had some fun.

Now you are again at a new beginning. Your patients will come to you with all level of human need, physical and spiritual, and you will have an extraordinary privilege to encounter those human experiences — pain, birth, fear, death, and love, which are potentially the most revelatory to humankind. Hopefully, you will feel great joy and wonder in the great adventure that awaits you.

Be as gentle with yourselves as you are with those who seek your help, and keep in touch, or let word of you filter back here through one another so that I may continue to delight in being a part of your lives. All the best . . .

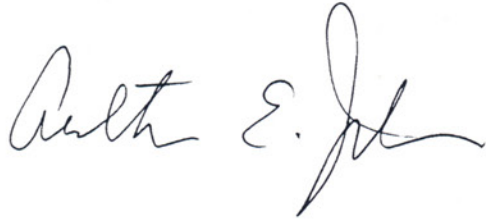

Debra Gillers

Associate Dean for Admissions

Aldustus E. Jordan, Ed.D.

Associate Dean for Student Affairs

Dear Class of 1991:

You are the 16th class that I have had the privilege and pleasure to get to know, observe, and see graduate. After all these years, there is one thing about which I am sure and that is that no two classes are the same. Sure, we have had some repeats of names, numerous repeats of alma maters, even some siblings, but no two classes are the same. Each class has its own collective character, cast of characters, a different texture, a different feel to it. You established your identity to me very early. You are a class that cares, a class with a respect for the wonders of science, a class with boundless energy and enthusiasm. Oh yes, you also like to have a good time. You have translated ideas into positive action and made a tremendous impact on the future of the School of Medicine.

You brought new energy to established traditional School of Medicine events such as the Orientation, the Pot Luck Dinner, and the numerous creative events you designed to bring together faculty and students. Your organized trip to the AMSA conference in Nevada probably broke a world record for student participation from a single medical school. Your willingness to not only initiate an idea, but to work to make it happen did not go unnoticed by me in your numerous fundraisers. The now annual Holiday Semi-formal is the creation of your class and an event which relieves a great deal of stress and anxiety. I thank each of you for your contributions to these important social activities.

Caring is a quality that cannot be taught from a textbook, created in a laboratory, or turned on and off. Caring is a conscience decision which is nurtured over time. I must confess to (probably what some of you already know) the fact that I value and respect people who demonstrate that they care about persons other than themselves. It is a bias that makes me proud. You have made me extremely proud of you in your contributions on behalf of others. You care. I thank you for continuing to make what I do both fun and rewarding. As an educator, the real payoff for me is in seeing you grow and develop as people and as professionals. I feel good about your development at Stony Brook. Now you are physicians — continue to care.

The initial AIDS Education Project was developed in your class. Without fanfare or concern for personal recognition, members of your class identified a health issue, learned about it, and began to teach young school children about the disease. The efforts of members of this project continues to make a major contribution to the well being of hundreds of children and their families. In addition, you have added to a legacy of community involvement by the School of Medicine. I value your positive action. I thank each of you for your time and energy in this important project.

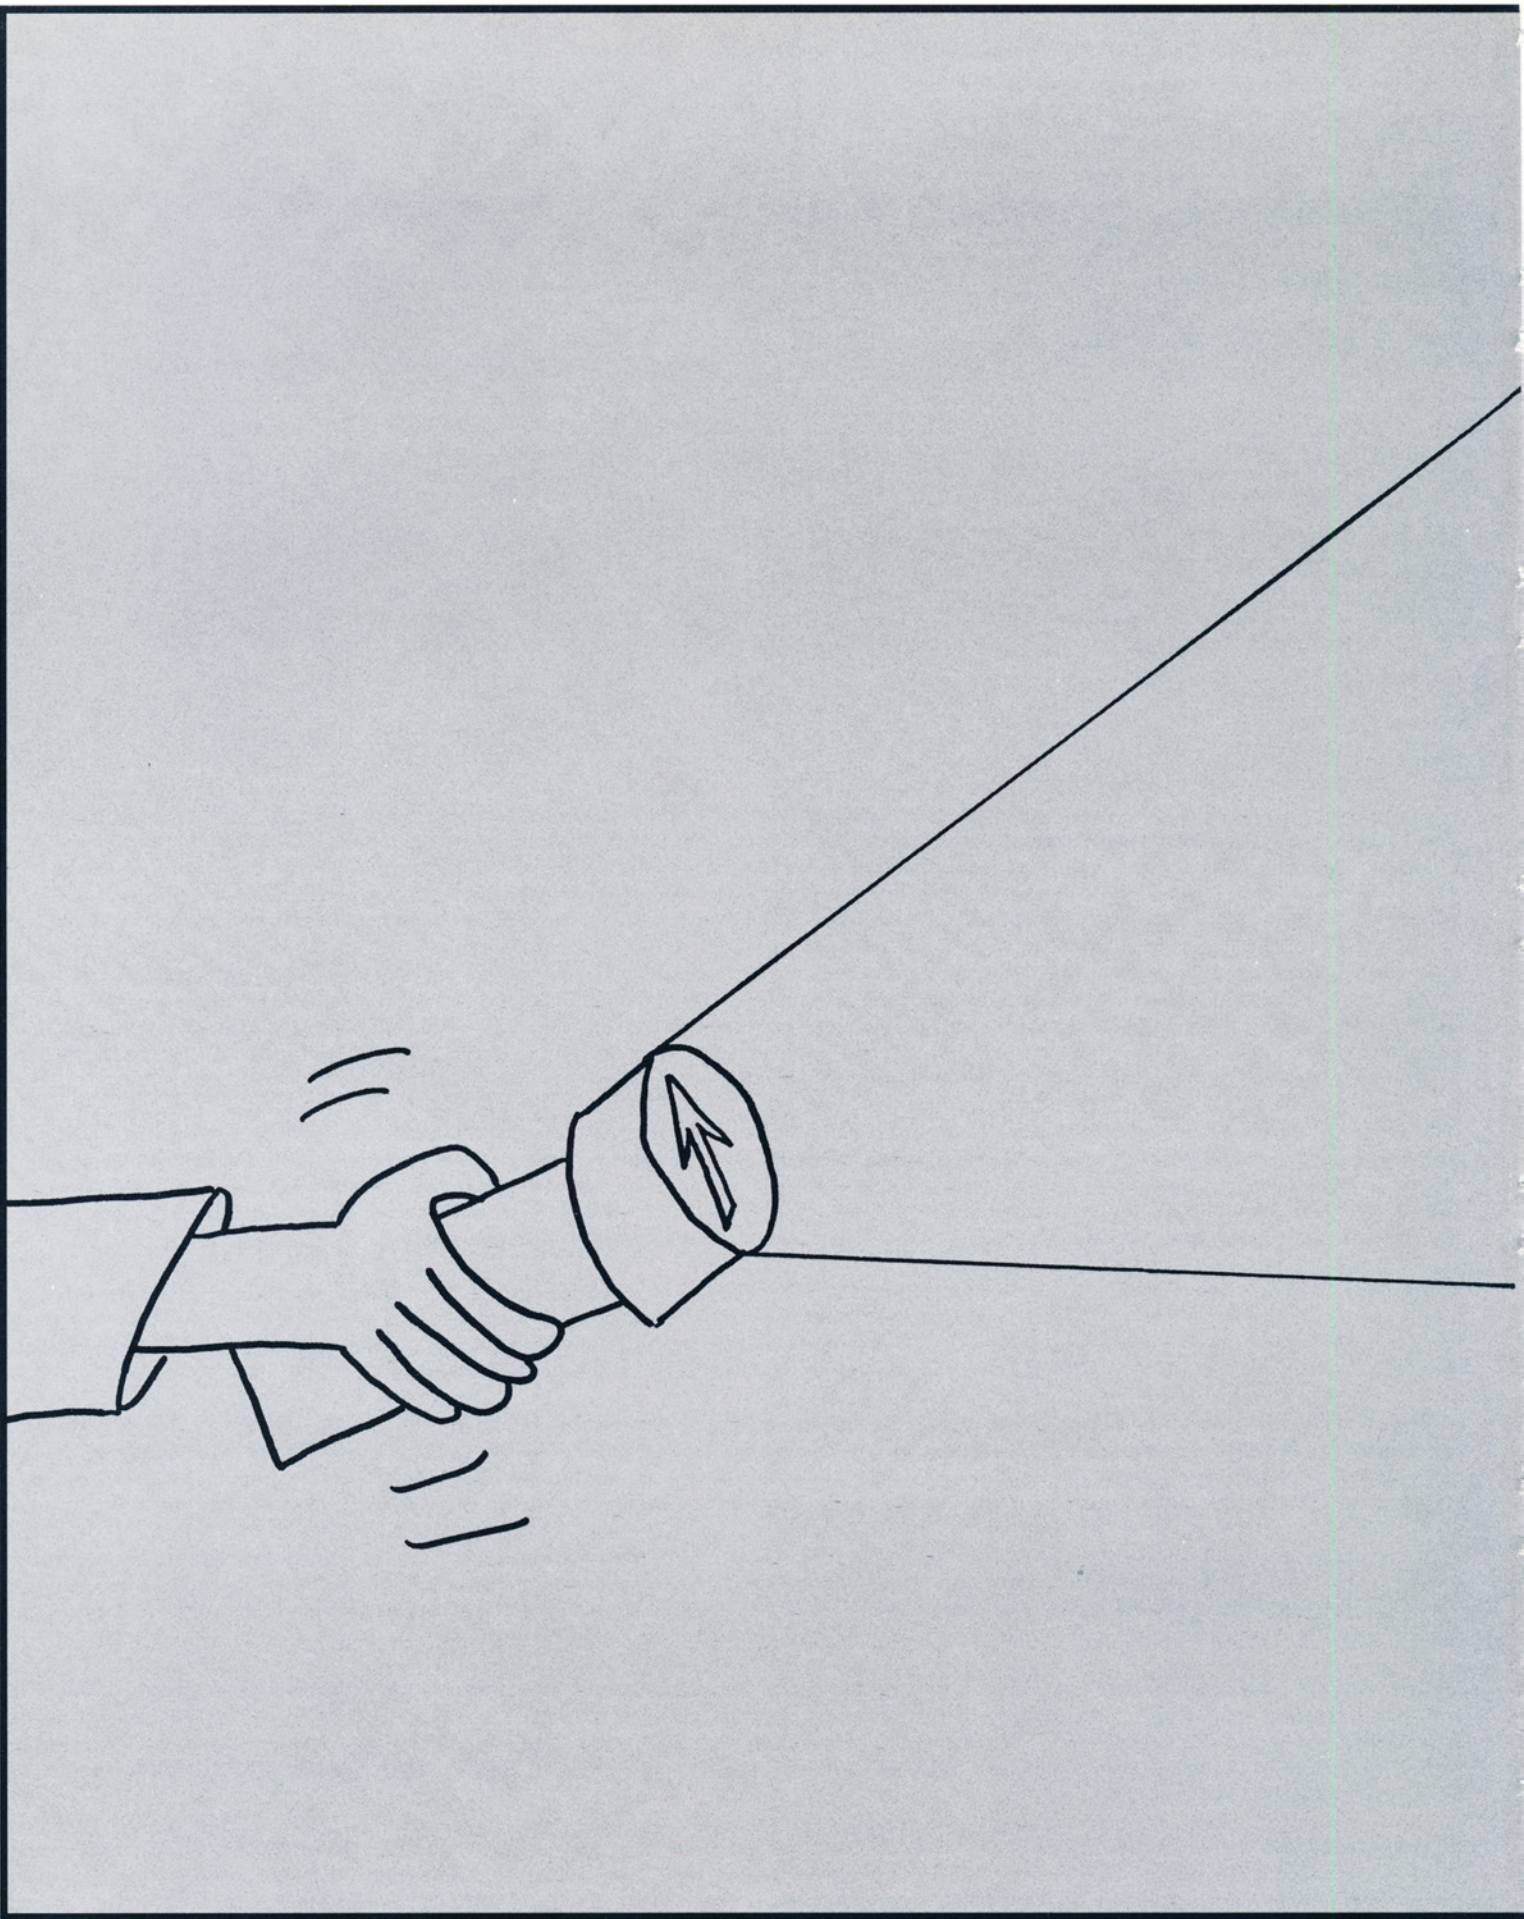

An open mind, a commitment to cultural diversity, and the courage to explore the realm of possibilities in medicine led to the development of the Issues in Medicine Club. A willingness to move beyond the traditional medical practices and explore acupuncture, meditation, and even herbs characterized the club. Through your efforts we have been exposed to the many possibilities of treatment — possibilities which may be the rule and not the exception for many of your patients. I value your positive action. I thank each of you for your time and energy in this important project.

At times it appears that the pain and suffering of others is greater than our capacity to give of ourselves. Your efforts in working with and comforting the refugees of El Salvador demonstrated that many of you were willing and able to move beyond your personal concerns and reach out to others less fortunate. We are privileged and lucky, you and I; but it is our capacity to dare to make a difference in the lives of others that makes what you do worthwhile. I value your positive action. I thank each of you for your time and energy in this important project.

The marriage of science and compassion is both powerful and beautiful. A marvelous thing about science is that its limitless qualities keep hope alive for the possibilities of making even greater contributions to the advancement of civilization when it is used in a compassionate fashion. The “cutting edge” always appears to be within the reach of those who persevere and work hard. Compassion, like science, has no boundaries and keeps the human spirit hopeful and vibrant. Test the limits of science and compassion — they need not be mutually exclusive. The combination of science and compassion will make your lives meaningful, satisfying, and complete.

I will certainly miss the personal interaction, interesting conversations, and sharp wit of many of your classmates. Hopefully, you are not the last class in which I can find some 60's people. I thank you for sharing some of your doubts, fears, uncertainties, joys, and dreams with me. I consider it a privilege that you have allowed me to see you at your most vulnerable moments and have you trust my advice and counsel. You are a great group of folks. Keep in touch with us. Above all continue to make a difference.

God bless each of you.

THEIR BODIES To the Students of Anatomy at Indiana University

That gaunt old man came first, his hair as white
As your scoured tables. Maybe you'll recollect him
By the scars of steelmill burns on the backs of his hands,
On the nape of his neck, on his arms and sinewy legs,
And her by the enduring innocence
Of her face, as open to all of you in death
As it would have been in life: she would memorize
Your names and ages and pastimes and hometowns
If she could, but she can't now, so remember her.

They believed in doctors, listened to their advice,
And followed it faithfully. You should treat them
One last time as they would have treated you.
They had been kind to others all their lives
And believed in being useful. Remember somewhere
Their son is trying hard to believe you'll learn
As much as possible from them, as he did,
And will do your best to learn politely and truly.

They gave away the gift of those useful bodies
Against his wish. (They had their own ways
Of doing everything, always.) If you're not certain
Which ones are theirs, be gentle to everybody.

Oh, the places you'll go! There is fun to be done!
There are points to be scored. There are games to be won.
And the magical things you can do with that ball
will make you the winning-est winner of all.

You'll get mixed up, of course,
as you already know.
You'll get mixed up
with many strange birds as you go.
So be sure when you step.
Step with care and great tact
and remember that Life's
a Great Balancing Act.
Just never forget to be dexterous and deft.
And *never* mix up your right foot with your left.

Today is your day!
Your mountain is waiting.
So...*get on your way!*

— Dr. Seuss, *Oh, the Places You'll Go!*

CHANGE

"The nature of change is that it takes you somewhere else than where you are now . . ."

You grow, that's the only thing
you can really be sure of,
growth . . .

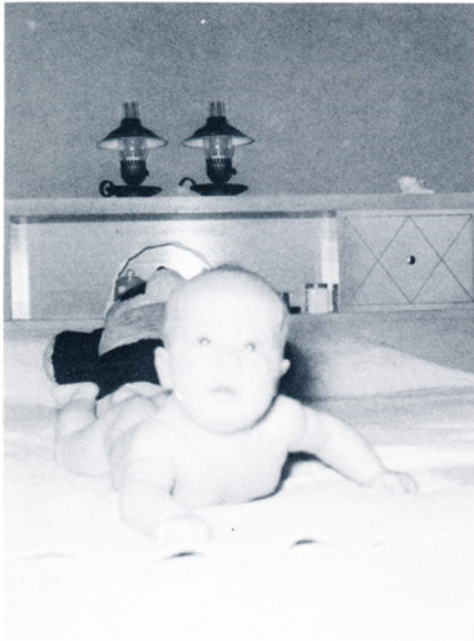

"But any change has its share of
surprises."

— Author Unknown

Determination, dedication,
loving and caring. Qualities a
mother dreams her child will
have - You've made my dream
come true. I love you - Mom.

Congratulations to
my wonderful sister.
I am very proud of
you and I love you
very much.
GO GET EM!
Love,
Melissa

SO OFTEN OVER THESE
PAST FOUR YEARS I'VE
HEARD YOUR FRUSTRATION
AND FELT YOUR WEARINESS.
THIS NEVER DAMPENED
THE NEED WITHIN YOU TO
BECOME A MEDICAL
DOCTOR. I AM FOREVER
PROUD OF WHAT YOU HAVE
ACCOMPLISHED, WHAT
YOU WILL ACCOMPLISH,
AND FOR WHO YOU ARE.
WITH ALL MY
LOVE,
GARY

we're so proud of you and your
accomplishments. It just adds
to the happiness we feel in being
your father. Love you - Gary

MANY SACRIFICES
YOU HAVE MADE
TO COME THIS
FAR, I COULD
NOT HAVE DONE
MY RESPECT
& LOVE. YOU
DESERVE LOVE
SUCCESS KIM

you have made my 86th year
a thrilling one. "My Granddaughter
the Doctor" "Mazel Tov!" Grandpa

Jane Steinberger

ANNOUNCEMENTS

Good morning! Boy, it's cold! What in the hell happened to summer? It sure went by in a hurry.

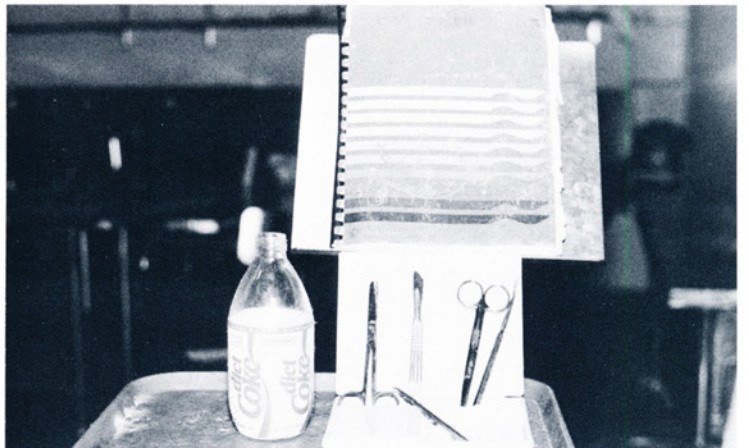

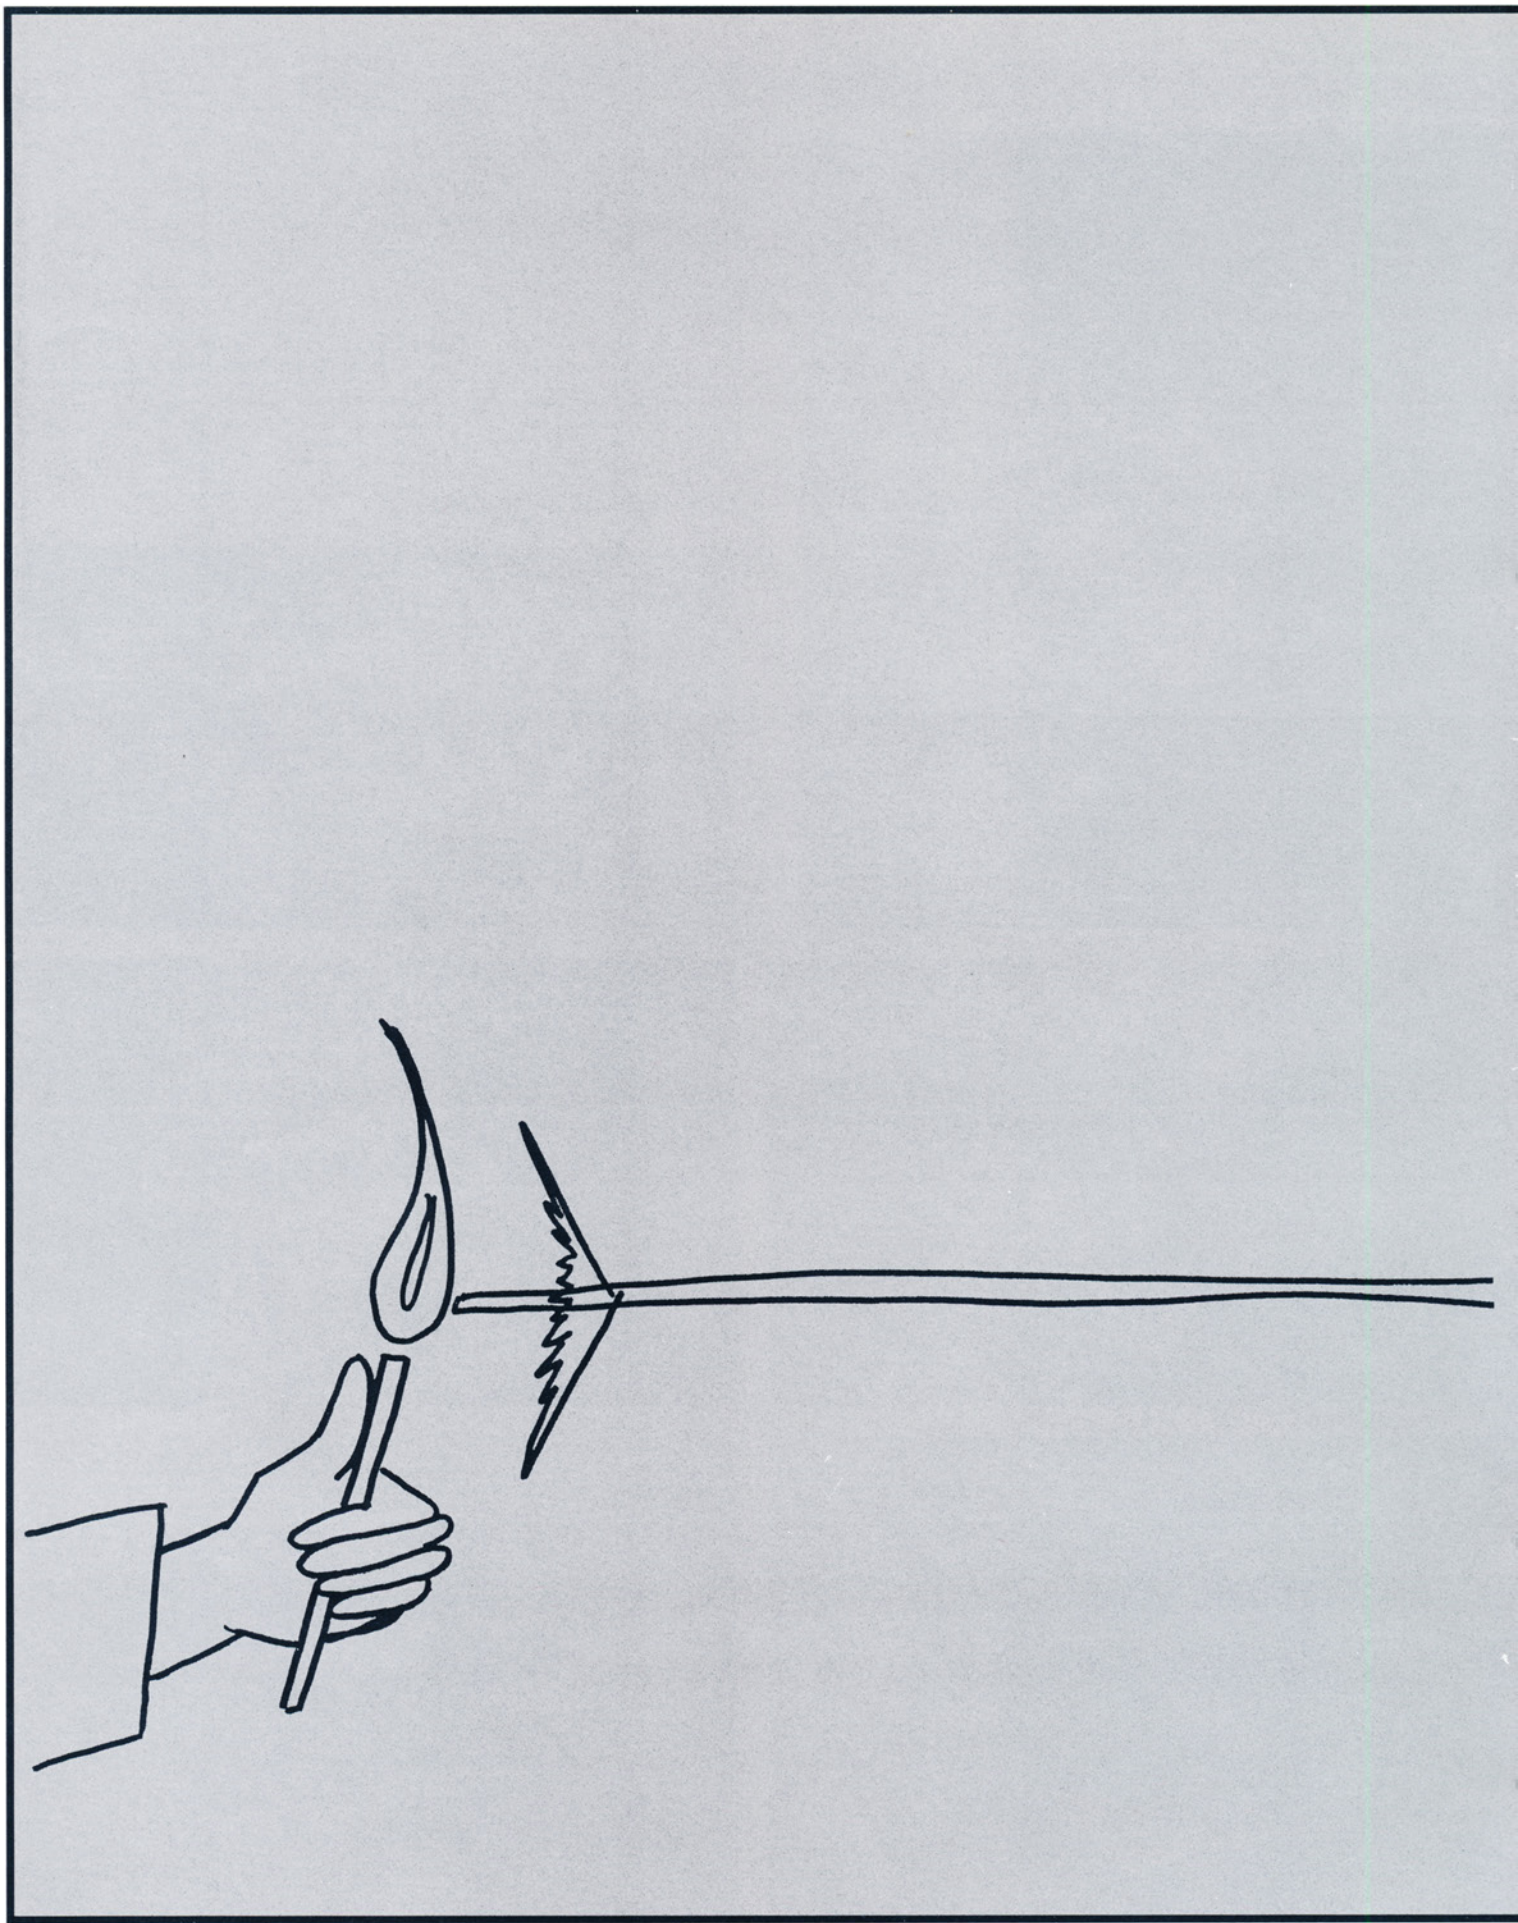

Microanatomy
9/2/87
Lecture #1 - The Cell
Page 1

The primary goal of the course is to teach you to identify and know every cell that occurs in the human body, what its function is, what it produces into the external environment (either inside the body or outside the body), and how these cells are organized into organs in such a way that the organs function in relationship to one another.

Such Humble Beginnings . . .

Lecture 1 Inst. Dr. Simon
9/2/87
Course Description

This course should:

1. Train students to think like physicians
2. Provide students with information required for National Boards.
3. Thoroughly convince you that entering medical school is a big mistake.

"What is IN Stryer is IN Stryer!"

OATH

I do solemnly swear by that which I hold most sacred, that:

I will be loyal to the profession of medicine and its humanitarian principles.

I will use my power to help the sick to the best of my ability and judgement;

I will abstain from harming or wronging any person by it.

I will not be so intrigued with the science of medicine that I will lose sight of patients as people.

I will attend to the suffering of my patients with compassion and will use my knowledge to minimize that suffering.

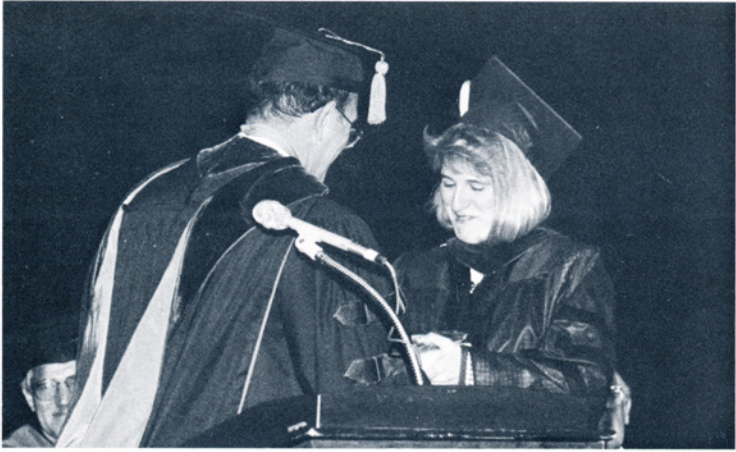

Whatever I see or hear professionally or privately which ought not be divulged I will keep secret.

I will hand on precepts, lectures and all other learning to students of medicine and to those who will succeed me.

I will strive for the improvement of my science and my art, knowing that medicine may be imperfect but that its progress is constant.

I make these promises solemnly, freely and upon my honor.

"YOU WILL HAVE TO LEARN MANY TEDIOUS THINGS,...
WHICH YOU WILL FORGET THE MOMENT YOU HAVE
PASSED YOUR FINAL EXAMINATION, BUT IN ANATOMY IT
IS BETTER TO HAVE LEARNED AND LOST THAN NEVER TO
HAVE LEARNED AT ALL."

W. Somerset Maugham

**CONGRATULATIONS TO THE CLASS OF 1991 FROM
THE DEPARTMENT OF ANATOMICAL SCIENCES**

In the words of frontporch philosopher Garrison Kiellor:

We carried the work ethic farther than God ever intended; and he must look down in sorrow at a nation so obsessed with productivity, materialism, career status and power that its citizens race pell-mell through life, impervious to the beauty of the natural world, the sweetness of fellowship, the joys of idleness, the fine arts of fishing and baseball and slow talk, of slow cooking and long summers on the porch sipping good whiskey, telling long lies.

KRON
